

ROD ANTENNA

RA10K30M

Rod Antenna, is used to measure the radiated emission in 10 kHz to 30 MHz frequency range according to various standard (CISPR, MIL, ETSI). The antenna consist of 104 cm rod and impedance matching amplifier. Ground plane, calibration adapter, bonding kit is also provided upon request.

Technical Specification

Frequency Range	10 kHz - 30 MHz
Antenna Factor	16 dB \pm 1 dB
Connector Type	N
Charging Voltage	9 VDC
